ABOUT

 CANCEL

 RESTART

 Restarting the Quickstart workspace resets the blockchain. All transactions and contract states will be reset.

WORKSPACE

WORKSPACE NAME

Quickstart

A friendly name for this workspace.

TRUFFLE PROJECTS

Link Truffle projects to this workspace by adding their `truffle-config.js` or `truffle.js` file to this workspace.

This will show useful contract and event data to better understand what's going on under the hood.

RESTART

⚠

Restarting the Quickstart workspace resets the blockchain. All transactions and contract states will be reset.

SERVER

HOSTNAME

127.0.0.1 - Loopback Pseudo-Interface 1

▼

PORT NUMBER

7545

NETWORK ID

5777

AUTOMINE

ERROR ON TRANSACTION FAILURE

The server will accept RPC connections on the following host and port.

Internal blockchain identifier of Ganache server.

Process transactions instantaneously.

When transactions fail, throw an error. If disabled, transaction failures will only be detectable via the "status" flag in the transaction receipt. Disabling this feature will make Ganache handle transaction failures like other Ethereum clients.

CHAIN FORKING

 CANCEL  SAVE AND RESTART

 Restarting the Quickstart workspace resets the blockchain. All transactions and contract states will be reset.

SERVER

HOSTNAME

127.0.0.1 - Loopback Pseudo-Interface 1 ▼

The server will accept RPC connections on the following host and port.

PORT NUMBER

7545

NETWORK ID

5777

Internal blockchain identifier of Ganache server.

AUTOMINE

☐

Process transactions instantaneously.

MINING BLOCK TIME (SECONDS)

30

The number of seconds to wait between mining new blocks and transactions.

CHAIN FORKING

☐

Fork an existing chain creating a new sandbox with the existing chain's accounts, contracts, transactions and data.

↺

SAVE AND RESTART

 Restarting the Quickstart workspace resets the blockchain. All transactions and contract states will be reset.

ACCOUNTS & KEYS

ACCOUNT DEFAULT BALANCE

100

The starting balance for accounts, in Ether.

TOTAL ACCOUNTS TO GENERATE

10

Total number of Accounts to create and pre-fund.

AUTOGENERATE HD MNEMONIC

☐

Turn on to automatically generate a new mnemonic and account addresses on each run.

Enter Mnemonic to use

note: this mnemonic is not secure; don't use it on a public blockchain.

Enter the Mnemonic you wish to use.

LOCK ACCOUNTS

☐

If enabled, accounts will be locked on startup.

 SAVE AND RESTART

 Restarting the Quickstart workspace resets the blockchain. All transactions and contract states will be reset.

GAS

GAS LIMIT

6721975

Maximum amount of gas available to each block and transaction. Leave blank for default.

GAS PRICE

20000000000

The price of each unit of gas, in WEI. Leave blank for default.

HARDFORK

HARDFORK

Muir Glacier

The hardfork to use. Default is Petersburg.

Private Network 구축

Private Network 구축

COMMANDS:

account	Manage accounts
attach	Start an interactive JavaScript environment (connect to node)
console	Start an interactive JavaScript environment
db	Low level database operations
dump	Dump a specific block from storage
dumpconfig	Show configuration values
dumpgenesis	Dumps genesis block JSON configuration to stdout
export	Export blockchain into file
export-preimages	Export the preimage database into an RLP stream
import	Import a blockchain file
import-preimages	Import the preimage database from an RLP stream
init	Bootstrap and initialize a new genesis block
js	Execute the specified JavaScript files
license	Display license information
makecache	Generate ethash verification cache (for testing)
makedag	Generate ethash mining DAG (for testing)
removedb	Remove blockchain and state databases
show-deprecated-flags	Show flags that have been deprecated
snapshot	A set of commands based on the snapshot
version	Print version numbers
version-check	Checks (online) whether the current version suffers from any known security vulnerabilities
wallet	Manage Ethereum presale wallets
help, h	Shows a list of commands or help for one command

Private Network 구축

ETHEREUM OPTIONS:

--config value	TOML configuration file
--datadir value	Data directory for the databases and keystore (default: "C:\\Users\\system888\\AppData\\Local\\Ethereum")
--datadir_ancient value	Data directory for ancient chain segments (default = inside chaindata)
--datadir_minfreedisk value	Minimum free disk space in MB, once reached triggers auto shut down (default = --cache_gc converted to MB, 0 = disabled)
--keystore value	Directory for the keystore (default = inside the datadir)
--usb	Enable monitoring and management of USB hardware wallets
--pcscdpath value	Path to the smartcard daemon (pcscd) socket file
--networkid value	Explicitly set network id (integer)(For testnets: use --ropsten, --rinkeby, --goerli instead) (default: 1)
--mainnet	Ethereum mainnet
--goerli	Görli network: pre-configured proof-of-authority test network
--rinkeby	Rinkeby network: pre-configured proof-of-authority test network
--ropsten	Ropsten network: pre-configured proof-of-work test network
--sepolia	Sepolia network: pre-configured proof-of-work test network
--syncmode value	Blockchain sync mode ("snap", "full" or "light") (default: snap)
--exitwhensynced	Exits after block synchronisation completes
--gcmode value	Blockchain garbage collection mode ("full", "archive") (default: "full")
--txlookuplimit value	Number of recent blocks to maintain transactions index for (default = about one year, 0 = entire chain) (default: 2350000)
--ethstats value	Reporting URL of a ethstats service (nodename:secret@host:port)
--identity value	Custom node name
--lightkdf	Reduce key-derivation RAM & CPU usage at some expense of KDF strength
--whitelist value	Comma separated block number-to-hash mappings to enforce (<number>=<hash>)

Private Network 구축

LIGHT CLIENT OPTIONS:

--light,serve value	Maximum percentage of time allowed for serving LES requests (multi-threaded processing allows values over 100) (default: 0)
--light,ingress value	Incoming bandwidth limit for serving light clients (kilobytes/sec, 0 = unlimited) (default: 0)
--light,egress value	Outgoing bandwidth limit for serving light clients (kilobytes/sec, 0 = unlimited) (default: 0)
--light,maxpeers value	Maximum number of light clients to serve, or light servers to attach to (default: 100)
--ulc,servers value	List of trusted ultra-light servers
--ulc,fraction value	Minimum % of trusted ultra-light servers required to announce a new head (default: 75)
--ulc,onlyannounce	Ultra light server sends announcements only
--light,nopruning	Disable ancient light chain data pruning
--light,nosyncserve	Enables serving light clients before syncing

DEVELOPER CHAIN OPTIONS:

--dev	Ephemeral proof-of-authority network with a pre-funded developer account, mining enabled
--dev,period value	Block period to use in developer mode (0 = mine only if transaction pending) (default: 0)
--dev,gaslimit value	Initial block gas limit (default: 11500000)

Private Network 구축

ETHASH OPTIONS:

--ethash,cachedir value	Directory to store the ethash verification caches (default = inside the datadir)
--ethash,cachesinmem value	Number of recent ethash caches to keep in memory (16MB each) (default: 2)
--ethash,cachesondisk value	Number of recent ethash caches to keep on disk (16MB each) (default: 3)
--ethash,cacheslockmmap	Lock memory maps of recent ethash caches
--ethash,dagdir value	Directory to store the ethash mining DAGs (default: "C:\\Users\\system888\\AppData\\Local\\Ethereum")
--ethash,dagsinmem value	Number of recent ethash mining DAGs to keep in memory (1+GB each) (default: 1)
--ethash,dagsondisk value	Number of recent ethash mining DAGs to keep on disk (1+GB each) (default: 2)
--ethash,dagslockmmap	Lock memory maps for recent ethash mining DAGs

TRANSACTION POOL OPTIONS:

--txpool,locals value	Comma separated accounts to treat as locals (no flush, priority inclusion)
--txpool,nolocals	Disables price exemptions for locally submitted transactions
--txpool,journal value	Disk journal for local transaction to survive node restarts (default: "transactions.rlp")
--txpool,regjournal value	Time interval to regenerate the local transaction journal (default: 1h0m0s)
--txpool,pricelimit value	Minimum gas price limit to enforce for acceptance into the pool (default: 1)
--txpool,pricebump value	Price bump percentage to replace an already existing transaction (default: 10)
--txpool,accountslots value	Minimum number of executable transaction slots guaranteed per account (default: 16)
--txpool,globalslots value	Maximum number of executable transaction slots for all accounts (default: 5120)
--txpool,accountqueue value	Maximum number of non-executable transaction slots permitted per account (default: 64)
--txpool,globalqueue value	Maximum number of non-executable transaction slots for all accounts (default: 1024)
--txpool,lifetime value	Maximum amount of time non-executable transaction are queued (default: 3h0m0s)

Private Network 구축

PERFORMANCE TUNING OPTIONS:

--cache value	Megabytes of memory allocated to internal caching (default = 4096 mainnet full node, 128 light mode) (default: 1024)
--cache,database value	Percentage of cache memory allowance to use for database io (default: 50)
--cache,trie value	Percentage of cache memory allowance to use for trie caching (default = 15% full mode, 30% archive mode) (default: 15)
--cache,trie,journal value	Disk journal directory for trie cache to survive node restarts (default: "triecache")
--cache,trie,rejournal value	Time interval to regenerate the trie cache journal (default: 1h0m0s)
--cache,gc value	Percentage of cache memory allowance to use for trie pruning (default = 25% full mode, 0% archive mode) (default: 25)
--cache,snapshot value	Percentage of cache memory allowance to use for snapshot caching (default = 10% full mode, 20% archive mode) (default: 10)
--cache,noprefetch	Disable heuristic state prefetch during block import (less CPU and disk IO, more time waiting for data)
--cache,preimages	Enable recording the SHA3/keccak preimages of trie keys

ACCOUNT OPTIONS:

--unlock value	Comma separated list of accounts to unlock
--password value	Password file to use for non-interactive password input
--signer value	External signer (url or path to ipc file)
--allow-insecure-unlock	Allow insecure account unlocking when account-related RPCs are exposed by http

Private Network 구축

API AND CONSOLE OPTIONS:

--ipcdisable	Disable the IPC-RPC server
--ipcpath value	Filename for IPC socket/pipe within the datadir (explicit paths escape it)
--http	Enable the HTTP-RPC server
--http,addr value	HTTP-RPC server listening interface (default: "localhost")
--http,port value	HTTP-RPC server listening port (default: 8545)
--http,api value	API's offered over the HTTP-RPC interface
--http,rpcprefix value	HTTP path prefix on which JSON-RPC is served. Use '/' to serve on all paths.
--http,corsdomain value	Comma separated list of domains from which to accept cross origin requests (browser enforced)
--http,vhosts value	Comma separated list of virtual hostnames from which to accept requests (server enforced). Accepts '*' wildcard. (default: "localhost")
--ws	Enable the WS-RPC server
--ws,addr value	WS-RPC server listening interface (default: "localhost")
--ws,port value	WS-RPC server listening port (default: 8546)
--ws,api value	API's offered over the WS-RPC interface
--ws,rpcprefix value	HTTP path prefix on which JSON-RPC is served. Use '/' to serve on all paths.
--ws,origins value	Origins from which to accept websockets requests
--graphql	Enable GraphQL on the HTTP-RPC server. Note that GraphQL can only be started if an HTTP server is started as well.
--graphql,corsdomain value	Comma separated list of domains from which to accept cross origin requests (browser enforced)
--graphql,vhosts value	Comma separated list of virtual hostnames from which to accept requests (server enforced). Accepts '*' wildcard. (default: "localhost")
--rpc,gascap value	Sets a cap on gas that can be used in eth_call/estimateGas (0=infinite) (default: 50000000)
--rpc,evmtimeout value	Sets a timeout used for eth_call (0=infinite) (default: 5s)
--rpc,txfeecap value	Sets a cap on transaction fee (in ether) that can be sent via the RPC APIs (0 = no cap) (default: 1)
--rpc,allow-unprotected-txs	Allow for unprotected (non EIP155 signed) transactions to be submitted via RPC
--jspath loadScript	JavaScript root path for loadScript (default: ".")
--exec value	Execute JavaScript statement
--preload value	Comma separated list of JavaScript files to preload into the console

Private Network 구축

NETWORKING OPTIONS:

--bootnodes value	Comma separated enode URLs for P2P discovery bootstrap
--discovery,dns value	Sets DNS discovery entry points (use "" to disable DNS)
--port value	Network listening port (default: 30303)
--maxpeers value	Maximum number of network peers (network disabled if set to 0) (default: 50)
--maxpendpeers value	Maximum number of pending connection attempts (defaults used if set to 0) (default: 0)
--nat value	NAT port mapping mechanism (any none upnp pmp extip:<IP>) (default: "any")
--nodiscover	Disables the peer discovery mechanism (manual peer addition)
--v5disc	Enables the experimental RLPx V5 (Topic Discovery) mechanism
--netrestrict value	Restricts network communication to the given IP networks (CIDR masks)
--nodekey value	P2P node key file
--nodekeyhex value	P2P node key as hex (for testing)

MINER OPTIONS:

--mine	Enable mining
--miner,threads value	Number of CPU threads to use for mining (default: 0)
--miner,notify value	Comma separated HTTP URL list to notify of new work packages
--miner,notify,full	Notify with pending block headers instead of work packages
--miner,gasprice value	Minimum gas price for mining a transaction (default: 1000000000)
--miner,gaslimit value	Target gas ceiling for mined blocks (default: 8000000)
--miner,etherbase value	Public address for block mining rewards (default = first account) (default: "0")
--miner,extradata value	Block extra data set by the miner (default = client version)
--miner,recommit value	Time interval to recreate the block being mined (default: 3s)
--miner,noverify	Disable remote sealing verification

Private Network 구축

GAS PRICE ORACLE OPTIONS:

--gpo.blocks value	Number of recent blocks to check for gas prices (default: 20)
--gpo.percentile value	Suggested gas price is the given percentile of a set of recent transaction gas prices (default: 60)
--gpo.maxprice value	Maximum transaction priority fee (or gasprice before London fork) to be recommended by gpo (default: 500000000000)
--gpo.ignoreprice value	Gas price below which gpo will ignore transactions (default: 2)

VIRTUAL MACHINE OPTIONS:

--vmdebug	Record information useful for VM and contract debugging
-----------	---

LOGGING AND DEBUGGING OPTIONS:

--fakepow	Disables proof-of-work verification
--nocompaction	Disables db compaction after import
--verbosity value	Logging verbosity: 0=silent, 1=error, 2=warn, 3=info, 4=debug, 5=detail (default: 3)
--vmodule value	Per-module verbosity: comma-separated list of <pattern>=<level> (e.g. eth/*=5,p2p=4)
--log.json	Format logs with JSON
--log.backtrace value	Request a stack trace at a specific logging statement (e.g. "block.go:271")
--log.debug	Prepends log messages with call-site location (file and line number)
--pprof	Enable the pprof HTTP server
--pprof.addr value	pprof HTTP server listening interface (default: "127.0.0.1")
--pprof.port value	pprof HTTP server listening port (default: 6060)
--pprof.memprofile rate value	Turn on memory profiling with the given rate (default: 524288)
--pprof.blockprofile rate value	Turn on block profiling with the given rate (default: 0)
--pprof.cpuprofile value	Write CPU profile to the given file
--trace value	Write execution trace to the given file

Private Network 구축

METRICS AND STATS OPTIONS:

```
--metrics          Enable metrics collection and reporting
--metrics.expensive Enable expensive metrics collection and reporting
--metrics.addr value Enable stand-alone metrics HTTP server listening interface (default: "127.0.0.1")
--metrics.port value Metrics HTTP server listening port (default: 6060)
--metrics.influxdb  Enable metrics export/push to an external InfluxDB database
--metrics.influxdb.endpoint value InfluxDB API endpoint to report metrics to (default: "http://localhost:8086")
--metrics.influxdb.database value InfluxDB database name to push reported metrics to (default: "geth")
--metrics.influxdb.username value Username to authorize access to the database (default: "test")
--metrics.influxdb.password value Password to authorize access to the database (default: "test")
--metrics.influxdb.tags value Comma-separated InfluxDB tags (key/values) attached to all measurements (default: "host=localhost")
--metrics.influxdbv2 Enable metrics export/push to an external InfluxDB v2 database
--metrics.influxdb.token value Token to authorize access to the database (v2 only) (default: "test")
--metrics.influxdb.bucket value InfluxDB bucket name to push reported metrics to (v2 only) (default: "geth")
--metrics.influxdb.organization value InfluxDB organization name (v2 only) (default: "geth")
```

ALIASED (deprecated) OPTIONS:

```
--nousb Disables monitoring for and managing USB hardware wallets (deprecated)
```

MISC OPTIONS:

```
--snapshot          Enables snapshot-database mode (default = enable)
--bloomfilter.size value Megabytes of memory allocated to bloom-filter for pruning (default: 2048)
--help, -h          show help
--override.arrowglacier value Manually specify Arrow Glacier fork-block, overriding the bundled setting (default: 0)
--override.terminaltotaldifficulty value Manually specify TerminalTotalDifficulty, overriding the bundled setting (default: 0)
```
